

METEOR DISPOSABLE KEG

The typical full character style of Alsace comes in this flavoursome lager, brewed by Brasserie Meteor, the only independent brewer in the Alsace region of France. The 30Ltr keg has cardboard outer packaging, therefore making it lightweight, at 31.9kg for a full keg. The Key Keg is designed with a bag in ball principle. The pressurized plastic ball houses a specially developed flexible inner bag. The beer is dispensed by pressuring the space between the bag and ball. This unique method has many advantages.

- ★ From the beginning the Meteor Key Keg is easy to install and connect up.
- ★ Maximum shelf life of up to nine months.
- ★ To dispense the beer the space between the bag and ball is pressured, therefore the CO₂ or air never comes in to contact with the beer, keeping it a more constant, perfect beer.
- ★ After connecting, the beer remains fresh for 3 - 4 weeks.
- ★ Because of the pressurizing system the content is dispensed right down to the last drop, ensuring no beer loss.
- ★ The Key Keg, with its plastic ball and cardboard packaging is entirely disposable and easy to dispose of. This solves the problem of storage as there is no need to store the empty kegs or return them.

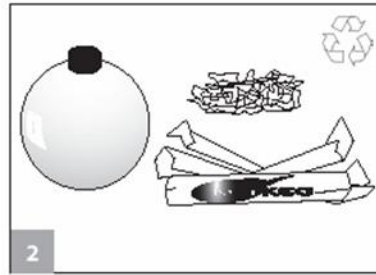

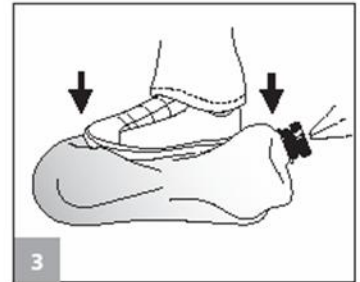

Disposing of Keg:

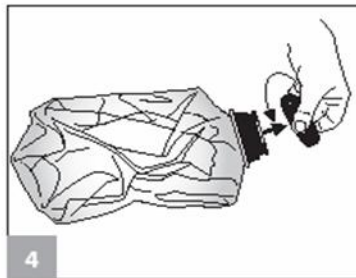

Step 1: Release the pressure by using only the Key Keg tool.

Step 2: Separate plastic and cardboard.

Step 3: Gradually squeeze the air out of the bag using your foot.

Step 4: The end result.

The Key Keg is 100% compliant with the essential environmental requirements of the European Union. It has been developed with both material recycling and energy reuse in mind making the Key Keg an important advancement for the environment, people and businesses.

We also have Meteor glasses and Meteor beer mats available.
